Learning Style: Virtual Classroom

Technology: Microsoft

Difficulty: Intermediate

Course Duration: 1 Day

Implementing a Machine Learning solution with Azure Databricks (DP-3014)

About This Course:

Azure Databricks offers a collaborative environment where data scientists and engineers can seamlessly integrate with popular tools like Apache Spark™ for big data processing and MLflow for managing the end-to-end machine learning lifecycle

Course Objectives:

- Get started with Azure Databricks
- Identify Azure Databricks workloads
- Understand key concepts
- Get to know Spark
- Create a Spark cluster
- Use Spark in notebooks
- Use Spark to work with data files
- Visualize data
- Understand principles of machine learning
- Machine learning in Azure Databricks
- Prepare data for machine learning
- Train a machine learning model
- Evaluate a machine learning model
- Capabilities of MLflow
- Run experiments with MLflow
- Register and serve models with MLflow
- Optimize hyperparameters with Hyperopt
- Review Hyperopt trials
- Scale Hyperopt trials
- What is AutoML?
- Use AutoML in the Azure Databricks user interface
- Use code to run an AutoML experiment
- Understand deep learning concepts
- Train models with PyTorch
- Distribute PyTorch training with Horovod

Audience:

- Data professionals seeking to utilize Azure Databricks for ML
- Data scientists/engineers wanting to apply ML workflows
- Azure users aiming to implement scalable ML solutions
- Professionals preparing for Azure Databricks certifications
- Technical personnel interested in combining Azure services with ML

Prerequisites:

- Fundamental understanding of Azure
- Basic knowledge of machine learning concepts
- Experience with Python programming
- Familiarity with Apache Spark and Databricks platform
- Prior exposure to data processing and ETL tasks

Course Outline:

- Explore Azure Databricks

- Use Apache Spark in Azure Databricks

- Train a machine learning model in Azure Databricks
- Use MLflow in Azure Databricks
- Tune hyperparameters in Azure Databricks
- Use AutoML in Azure Databricks
- Train deep learning models in Azure Databricks

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
